

## Note on the calibration of measuring equipment

Within the scope of certification for energy management systems (e.g. DIN EN ISO 50001), questions frequently arise regarding the calibration of the measurement technology and signal transducers used.

As the manufacturer of such measuring equipment, we hereby confirm that all devices supplied by us are tested, adjusted and calibrated in accordance with their technical data and internal specifications. The test equipment used is traceable to national standards. A test protocol is created and stored for each device, which we can provide to you as a factory calibration certificate on request.

Regular factory calibration is not required. However, we recommend calibration (comparison measurement) with a mobile measuring instrument which must have a higher accuracy class in order to meet the requirements of the standard.

If you have any further questions on this topic, please do not hesitate to contact us.

We are happy to support you in your measuring tasks.

Your KBR team.
